Read the following passage then Choose the correct answer (a), (b), (c) (d). (1-6)

Refrigeration is one of the most vital methods used to ensure the safety of our food. Its importance is in its ability to slow bacterial growth with its low temperatures. Since harmful bacteria grow most rapidly in temperatures between 4.4 C and 50 C, A temperature of 4.4C or below is necessary to keep food safe in fridge, using appliance thermometers. This a minimize the possibility of bacterial growth. Food stored at temperature above 4.4 C for more than two hours are at risk of being spoiled. In addition, leaving the refrigerator door open affect the temperature and possibly ruin the stored food. you must also consider the packaging placement of foods for optimal protection. Raw meat, poultry and seafood should be securely wrapped to prevent the contamination of other foods. perishable foods mustn't be stored in the refrigerator door because its temperature changes more than that of the cabinet. Finally, in order to keep your food safe, you must always keep your refrigerator clean. Spills must be immediately cleaned up and perishable foods disposed of every week.

1-All the following points ensure the safety of food Except.....
